Fiberplate®

Fibergrate® Resins

Vi-Corr® - A superior vinyl ester resin available only from Fibergrate, Vi-Corr was developed for reliable performance in the toughest environments. It offers outstanding resistance to a wide range of highly corrosive situations, ranging from caustic to acidic. In fact, no other resin system can match Vi-Corr's performance in highly acidic environments. Vi-Corr has DNV Type approval and is also available in a UL Classified resin formulation.

Standard Colors: Orange or Dark Gray.

Flame Spread: ASTM rating of 15 or less

IFR - This isophthalic polyester resin formulation is designed for industrial and chemical processing applications where corrosion resistance is important. IFR is also available in a UL Classified resin formulation.

Standard Colors: Green or Dark Gray

Flame Spread: ASTM rating of 20 or less

FGI - This food grade isophthalic polyester resin system is designed to meet the unique requirements of the food and beverage industry. This resin system has USDA acceptance and operates in temperatures up to 160°F with normal working loads.

Standard Colors: Light Gray or Dark Green

Flame Spread: ASTM rating of 20 or less

Corvex® - An economy polyester grating, Corvex outperforms a number of competitive fiberglass and metal products and meets the requirements for corrosion resistance found in light industrial and water/wastewater applications. Corvex has received DNV Type approval.

Standard Colors: Yellow, Dark Gray or Dark Green

Flame Spread: ASTM rating of 25 or less

XFR - This corrosion resistant vinyl ester resin was specially designed for extra fire retardancy and combines high operating temperatures with low flame spread. XFR is DNV Type approved

Standard Color: Dark Gray

Flame Spread: ASTM rating of 10 or less, a level exceeded by no other resin system

Super Vi-Corr® - A superior grade vinyl ester resin system designed for extreme operating temperatures (180 to 400 degrees F) and extremely corrosive environments such as solvents and acidic oxidizers, specified oxidizers, including aqueous chlorine and chlorine dioxide solutions forming sodium hypochlorite. This custom resin system is used mainly as packing hold-downs (bed limiters) and as packing supports in environmental or process scrubber and stripping applications.

Standard Color: Natural-Tan to Beige

Flame Spread: Non Fire Retardant, unless specified

ELS - This modified acrylic resin system is designed for low smoke generation. The added benefit of greater worker visibility and lower toxicity in emergencies, make ELS products ideal for tunnel, offshore, ship and other confined area applications. DNV Type Approved.

Standard Color: Light Gray

Flame Spread: ASTM rating of 15, smoke density index of 70 and Fuel Contribution of 0

Each year industrial plant managers and executives eliminate expensive corrosion related maintenance and safety issues by switching from traditional wood or metallic options to Fibergrate's fiberglass reinforced plastic (FRP) molded grating solutions. Fibergrate's FRP molded grating offers the best corrosion resistance of any FRP grating solution currently available. Combine the inherent corrosion resistance advantages of molded grating with Fibergrate's unmatched resin system offerings and you have the most effective and efficient way to attack corrosion problems in almost any facility. Fibergrate produces grating, plate and stair treads in ten different standard resin systems and will gladly work with customers to tailor a resin system to their particular need.

Need a special color? No problem! Fibergrate has a long history of providing custom color matches for industries from breweries and bottling to fountains, retail stores and other architectural applications. Fibergrate has a full time staff of chemists available to create the custom color match for your FRP grating, plate or stair tread needs.

Other Information

Standard Surface
Available Depths
Panel Sizes

Integral Grit
1/8", 1/4", 3/8", 1/2", 3/4"
3' x 10', 4' x 8', 4' x 12'

Fibergrate and Chemplate are manufactured by building up multiple layers of fiberglass reinforcement and specially-formulated resins. The result of this process is a solid composite panel offering both bi-directional strength and corrosion resistance.
